

Optional: In the above, all information is on one screen. It seems too congested. If there is good way to customize.

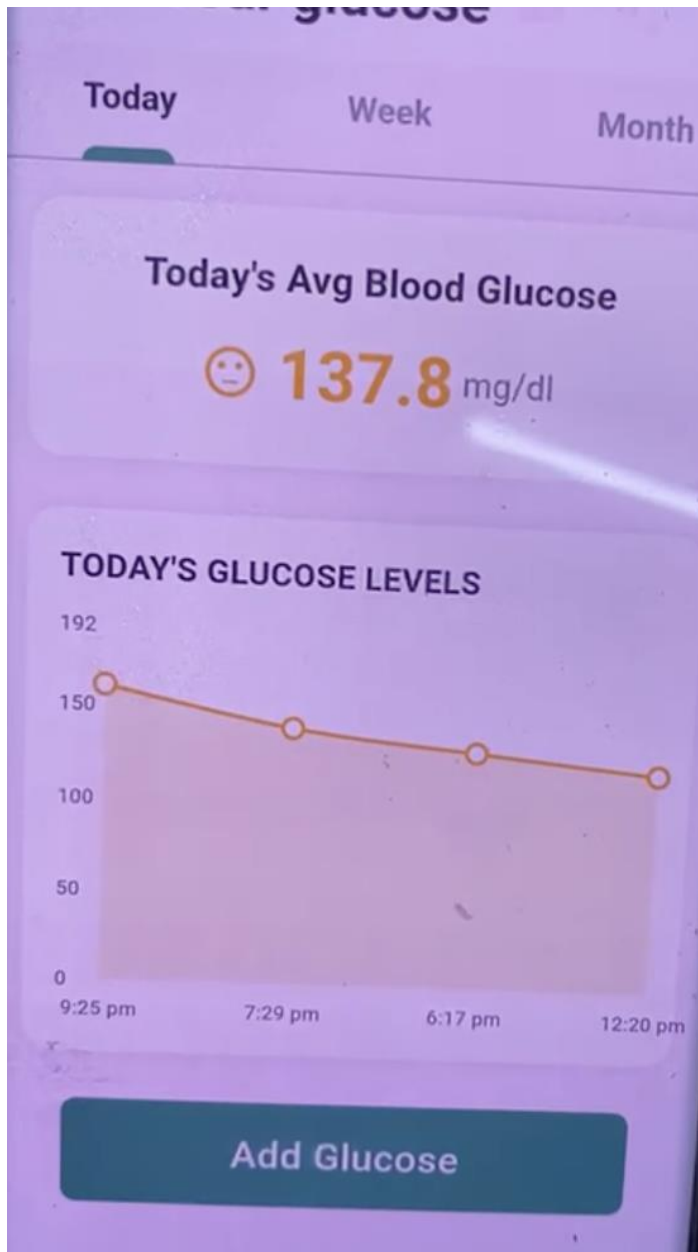

1. Eaten – 55% seems like static information. Nothing changes, even when I click it, its not opening.
2. Step count – not functional – not working.
3. Expected due date, not working, can't modify. Still not functional.
4. LMP cannot be accessed or modified.
5. For LMP, the reminders should be working, not working.

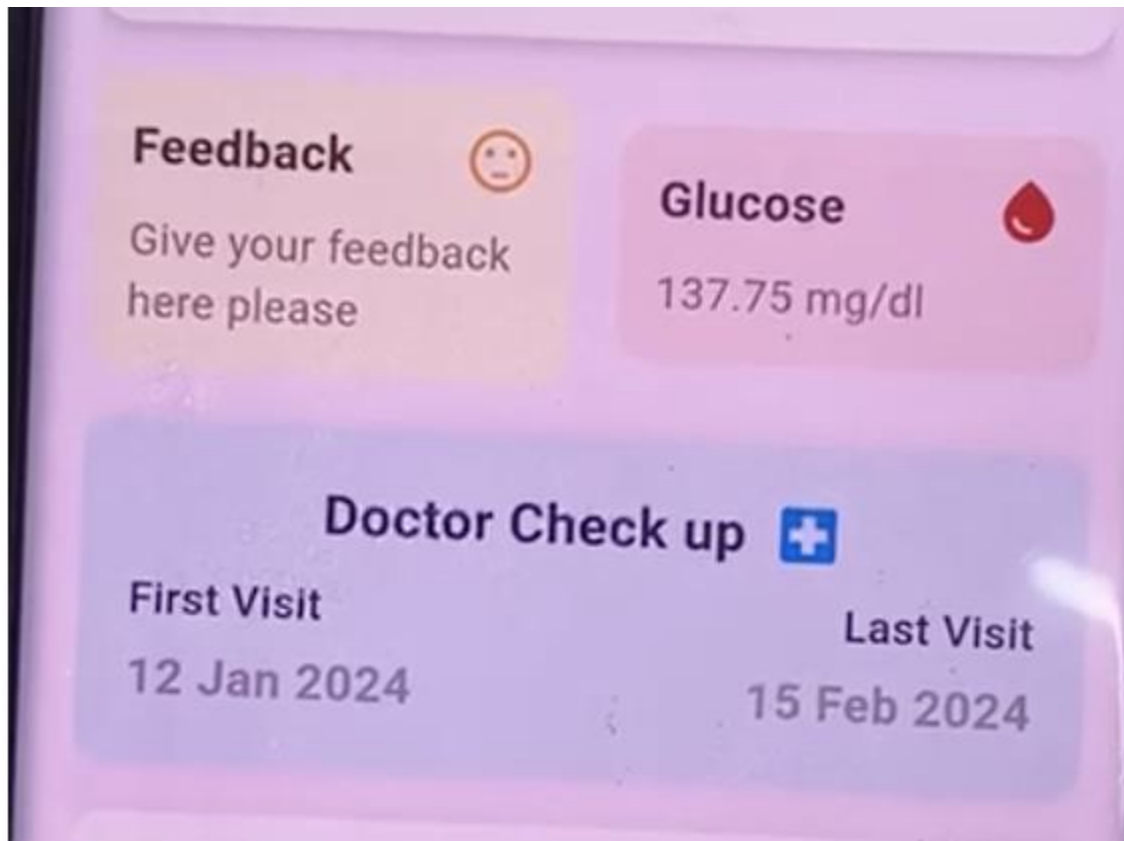

1. GDM info is added: can it be a better version, customization to looks good?
2. The search button is not working. When I search anything, nothing happens.

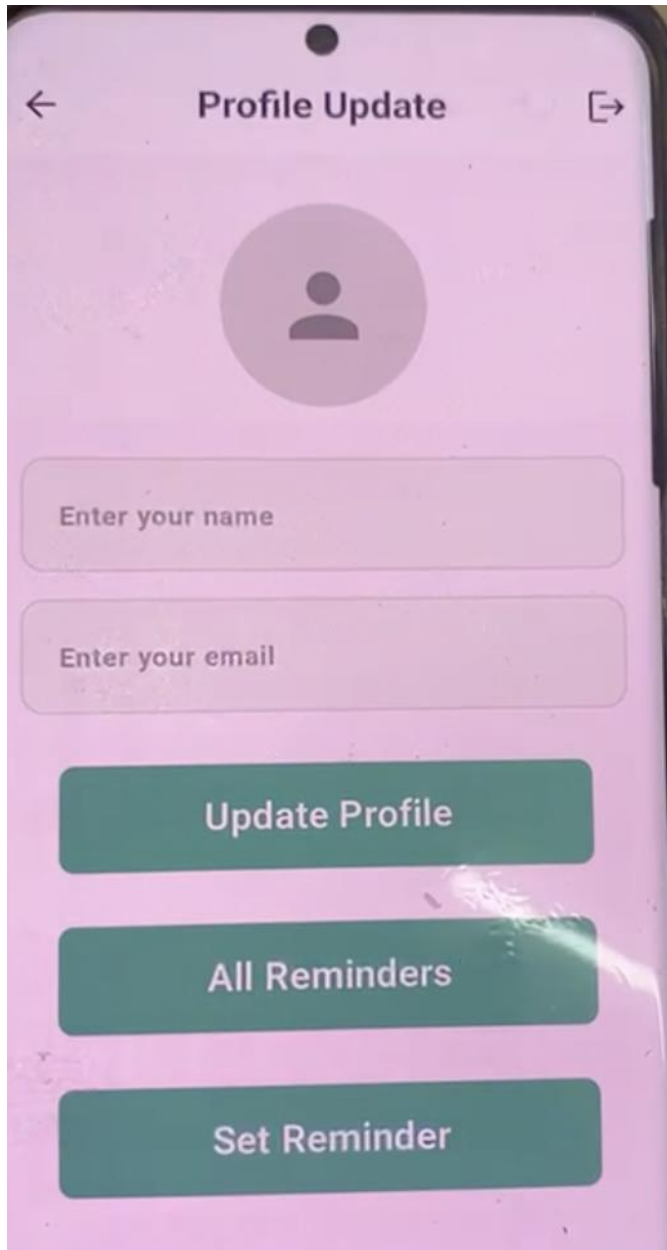

This is not working. Cannot be clicked and opened.

1. This glucose doesn't show before or after meal glucose level.
2. It should show the reading for each time user insert value. E.g. before, after breakfast and so on. Then it can show the overall graph.
3. Add the glucose level value option as **mmol/L** as well. So, it can be either mg/dL or mmol/L based on user preferred option.
4. Select time option – a bit difficult to understand or set. Can we make it user friendly?
5. The Glucose level data is not updating, the values remains the same, the chart is not working.

Doctor check-up not working. [Update it](#) or [Remove it](#).

1. This is also not updated. Add some basic info here, such as my weight, LMP.
2. How to switch among platforms? Not pregnant? Or doctor? Better to add it here.
